

Python Calculations Breakdown

Data needed

This section breaks down the data used in the 'Current Quoting Tool.xlsx' workbook. The data is separated by worksheet and whether it is inputted, already stored or calculated.

ESTIMATE FORM

Inputted

- Customer information - name, address, phone, email, data
- Project information - project type, area name, area dimensions (width, depth, height), ceiling?(dropdown), baseboard?(dropdown), # of coats (primer and finish)
- Doors - door type (dropdown), quantity, coats
- Accessories - accessory type (dropdown), quantity, coats
- Gallons calc - coverage sf

Calculated

- Project information - total area (from *Areas and Paint*)
- Total area (for all areas) (from *ESTIMATED FORM*)
- Initial Estimate (from *ESTIMATED FORM*, *List*, and *Paint Unified*)
- Price per area (from *ESTIMATED FORM*)
- Doors price (from *ESTIMATED FORM*)
- Accessories price (from *ESTIMATED FORM*)
- Grand total (from *ESTIMATED FORM*)
- Gallons calc -Gallons needed (from *ESTIMATED FORM*)
-

Areas and Paint

Inputted

- Wall area information - finish type (dropdown)
- Ceiling area information - finish type (dropdown)
- Labor values - HR special Labor
- General priming wall (dropdown) and General priming ceiling (dropdown)
- Labor wall ceiling paint price and Hr Value special labor price
- Final price calculation - discount

Calculated

- Area/room name (from *ESTIMATED FORM*)

- Wall area information - area sf, primer coats, finish coats, baseboard lengths (from *ESTIMATED FORM*)
- Ceiling area information - area sf, primer coats, finish coats
- Wall paint information - total area, \$ primer paint, \$ finish paint (from *Areas and Painting and Calculations*)
- Ceiling paint information - total area, \$ primer paint, \$ finish paint (from *Areas and Painting, Calculations, and Paint Unified*)
- Labor values - \$ Wall Labor, \$ Ceiling Labor, \$ Special labor (from *Areas and Painting*)
- Price per item - item price paint, item price labor and sub-total price (from *Areas and Painting*)
- Finish wall paint summary - paint, total gal and total price (from *Pivot Finish wall*)
- Finish ceiling paint summary - paint, total gal and total price (from *Pivot Finish Ceiling*)
- Primary wall summary - primer, total gal and total price (from *Areas and Painting*)
- Primary wall ceiling - primer, total gal and total price (from *Areas and Painting*)
- Final price calculation - labor value and weight, pain value and weight, price
- Costs breakdown - labor, paint, OI, OH, IM, net, net % (from *Areas and Painting*)
- % difference (from *ESTIMATED FORM* and *Areas and Painting*)

Doors and Accessories

Stored

- Doors - door type, total area sf, labor sf, paint sf, value per door (1 coat)
- Accessories - accessory, area sf per ft, labor sf, paint sf, value per ft

Pivot Finish Wall

Pivot table created from Calculations

Inputted from Calculations

- Wall finish type, sum of wall finish

Calculated

- Sum of wall finish paint gal unit, gal round up
- Total price per finish (from *Pivot Finish Wall and Paint Unified*)

Pivot Finish Ceiling

Pivot table created from Calculations

Inputted from Calculations

- Ceiling finish type, sum of wall finish

Calculated

- Sum of ceiling finish paint gal unit, gal round up
- Total price per finish (from *Pivot Finish Ceiling and Paint Unified*)

Calculations

Inputted from Areas and Paint

- Area/room name
- Wall information - wall finish type, primer area, finish area
- Ceiling information - ceiling finish type, primer area, finish area
- General priming wall information - reference
- General priming ceiling information - reference

Calculated

- Wall information - total area, wall primer paint gal unit, wall finish paint gal unit (from *Calculations and Paint Unified*)
- Ceiling information - total area, ceiling primer paint gal unit, ceiling finish paint gal unit (from *Calculations and Paint Unified*)
- General priming wall information - price gal, total gal, total price (from *Calculations and Paint Unified*)
- General priming ceiling information - price gal, total gal, total price (from *Calculations and Paint Unified*)

Paint Unified

Data seems to be pulled from external source so should be stored in suppliers excel sheet

Stored

- Information- vendor, sales number, description, unit price, new price, quantity, U/M, tax, price GT, % margin, price customer, coverage sf, price sf, application

Calculated

- Ceiling information - ceiling average, ceiling median, max, min (from *Paint Unified*)
- Finish information - finish average, finish median, max, min (from *Paint Unified*)
- Primer information - primer average, primer median, max, min (from *Paint Unified*)
- Total average information - special, standard, commercial (from *Paint Unified*)

List

Stored

- Description, value, ceiling?, room list, metal and metal price? (needs to be confirmed)

QuickBooks data

This section holds the extra calculations and information needed for the Quickbooks estimate. The inputted information should be included in the RShiny Dashboard

Inputted

- Customer information - full name, display name (full name), email, mobile number, address, customer type, default tax code
- Estimate general information - estimate and expiration date, service and tags

Pulled/Calculated

- Estimation calc information - product/service, description breakdown, rate
- Tax inclusion - should be set to exclude
